

The clinical layer for V-Clinic

From a five-station screening to a continuous athlete-health loop. Healthy4U, white-label, under the VIAI brand.

We did our homework on VIAI first

Four facts from viai.ae, Forbes Middle East and the May 2026 funding announcement shaped this proposal.

PRODUCT

Engo glasses + VIAI app

22+ live metrics, on-device AI coaching, Pro and Elite subscriptions live since May 2026.

V-CLINIC

Five stations, Abu Dhabi first

Movement analysis, risk assessment, VO₂ max, performance insights, recovery protocol. Opening soon.

CAPITAL

\$1.2M seed, May 2026

Qatar Development Bank, Midrar Holding, Emirates Development Bank. Raised to scale V-Clinics across the GCC.

B2B TRACK

Clinics and workforce safety

Health Innovation Hub with Dr. O Holdings; an application form for clinics and enterprise safety teams on viai.ae.

“We believe the future of healthcare is not limited to hospitals. It will be in homes, communities, sports facilities and smart health centres that help people understand their bodies earlier, respond faster and live healthier lives.”

ABDULLA ABUEBEID, CO-FOUNDER & CEO, VIAI

Healthy4U was built on the same premise: care that does not stop when the athlete leaves the building.

Stations produce data. A clinic runs on a journey.

Every athlete who passes through V-Clinic has a before, a during and an after. The stations cover the middle.

BEFORE THE VISIT

Who collects the history?

Injuries, training load, sleep, goals, current protocol. Needed before the athlete steps on the treadmill.

Today: a form at the front desk, or nothing.

DURING THE VISIT

Who writes the report?

The physio talks to the athlete, reads five station outputs and has to produce a structured conclusion.

Today: the physio, after hours.

AFTER THE VISIT

Who watches the protocol?

Is the plan followed? What do the glasses and the ring say a week later? Who reacts if something drifts?

Today: nobody, until the next visit.

OUR READING

A semi-autonomous clinic needs an autonomous layer around the stations. That layer is what we have already built and run.

Six steps of the V-Clinic journey, and what runs under each

V-CLINIC STEP	WHAT HEALTHY4U ADDS	STATUS
1 Booking and arrival	Pre-visit athlete intake. A structured questionnaire in the athlete's language, turned by AI into a one-screen summary before the session starts.	LIVE
2 Five stations	Unified athlete record. Station results, history, wearable trends and past visits in one continuously updated record. FHIR/HL7.	LIVE
3 Consultation	AI scribe and voice control. The clinician speaks, notes are structured in real time. No documentation after hours.	LIVE
4 Recovery protocol	Protocol delivered to the phone. Station-five output becomes a plan with reminders. Acceptance and adherence are measured.	LIVE VIAI APP
5 Between visits	AI assistant 24/7 and continuous monitoring. Apple Health and Android Health today; Engo and ring data via the VIAI app in the pilot. Clinician alerted only on change.	LIVE ENGO · RING
6 Next location	Clinic dashboard per site. Practice analytics across locations; telehealth follow-ups with real-time translation anywhere in the GCC.	LIVE

Measured in a private practice, six months, three physicians

The same platform, deployed in a family-medicine clinic. The clinic's own numbers, before and after.

-97%

Time to collect history
15+ minutes → 30 seconds

+30%

Patients per day
No extra hours, no extra staff

+35%

Treatment-plan acceptance
Compared with pre-deployment

100%

Visits with a structured summary
Every consultation, every time

Throughput

+30% a day means more screenings per station at the same headcount.

Retention

Plan acceptance is the number that keeps a Pro or Elite subscriber. An athlete who follows the protocol renews.

Data

A structured summary on every visit is the dataset your injury-prediction models need.

What is live, and what we add for VIAI in the pilot

“Live” is in production now. “Pilot” is scoped and delivered in the first phase. We label honestly.

PILOT

White-label

VIAI brand on every screen, athlete-facing and clinician-facing. Healthy4U stays invisible.

LIVE

PILOT

Languages

Multilingual today, with the AI scribe working in any spoken language. Arabic interface for athletes and staff is added in the pilot.

PILOT

Data stays in the UAE

Deployment in a UAE cloud region or on-premises at the clinic. No biometric data leaves your perimeter, in line with VIAI's privacy-first stance.

LIVE

PILOT

Regulatory path

FHIR/HL7 records today. DoH Abu Dhabi requirements and a Malaffi connection are scoped together with your compliance team.

Audit, pilot, roll-out

Metrics are fixed before the pilot starts and measured from day one.

STAGE 1 • 2 WEEKS

Audit and consulting

- Map the five stations and the clinic flow
- Agree the data contract with the VIAI app
- Fix the pilot metrics up front

STAGE 2 • 8–12 WEEKS

Pilot project

- First Abu Dhabi V-Clinic, VIAI-branded
- Intake, scribe, record, protocol, monitoring
- Metrics measured from day one

STAGE 3 • ONGOING

Roll-out and support

- Per-location licence as V-Clinics open across the GCC
- One platform, every site on one dashboard
- Arabic, data residency, Malaffi in the base package

Commercials. Pilot fee and per-location licence are shared after the audit call, once the station flow is mapped. No integration is priced before we have seen it.

Healthcare is a focus industry. AI assistants for doctors and patients, EMR analysis, monitoring, voice interfaces. Healthy4U is that track in production.

64 people, 48 projects, Ocean Framework™. Research Center tests models on real clinical tasks; the engineering team builds and supports. Reused modules cut build time by 59%.

Already present in the UAE. We work in Russia, Belarus, Kazakhstan, the UAE and Turkey. A UAE deployment is not our first.

What the pilot includes, and what we need from VIAI

DELIVERABLES · FIRST ABU DHABI V-CLINIC

- 01 **Athlete intake**
VIAI-branded pre-visit questionnaire in English and Arabic; AI summary on the clinician's screen before the session.
- 02 **Unified athlete record**
Outputs of all five stations imported into one record (file or API, formats agreed at audit), plus history and wearable trends.
- 03 **AI scribe in the consultation room**
Voice-first notes, structured report template agreed with your physios, report ready when the athlete leaves.
- 04 **Recovery protocol on the phone**
Station-five output turned into a plan with reminders; acceptance and 30-day adherence tracked.
- 05 **Between-visit monitoring**
Apple Health and Android Health from day one; Engo glasses and ring through the VIAI app API; alerts only on change.
- 06 **Clinic dashboard**
Throughput, plan acceptance, adherence and alerts per physio and per site, weekly metric report to VIAI.
- 07 **Deployment and brand**
UAE cloud region or on-premises, VIAI branding on every screen, two staff training sessions, support for the whole pilot.

Success metrics, fixed before day one: Intake time · athletes per physio per day · protocol acceptance · 30-day adherence · share of visits with a structured report.

FROM VIAI

- One V-Clinic location and two or three clinicians for the pilot
- Data formats of the five stations, or access to the devices' export
- API access to the VIAI app, or an engineer to define it with us
- A compliance contact for DoH Abu Dhabi and Malaffi questions
- Brand assets: logo, colours, tone of voice

Audit 2 weeks → build and integrate 4-6 weeks → live pilot 6 weeks with metrics measured from day one

Thirty minutes, one scenario

We show Healthy4U on a V-Clinic visit: an athlete arrives, passes the five stations, leaves with a protocol on the phone, and the clinician has a finished report before the next athlete walks in.
